**Abstract** - The abstract should contain up to 200-300 words. Full paper written in MS Word shall observe the guidelines described below.

[line]

**Keywords:** List of 5-10 words or phrases relevant to the subject of the paper, separated by commas. (centre)

[line]

---

## 1. Introduction

[line]

A paper should not exceed 10 pages.

Papers must be written in British English. Technical terms should be explained if they are highly specialized, in the session called "Glossary". Abbreviations should be explained at least upon first use.

Framework structure of the document includes: Title, Author(s), Abstract, Keywords, Introduction, Body of the Paper, Glossary (optional), Acknowledgements (optional), and References.

Main parts of the paper, chapters, should be numbered with Roman numbers. Sub-chapters must not include this kind of numbering and can be marked also by bullets or graphic characters.

The paper includes a two-column structure, separated by a one centimetre.

[line]

### Format

A proper appearance of the paper will help the reader go through it more easily. To obtain it, is imperative that authors use this template.

Please observe the following rules: pages should have the following format: A4 paper, Times New Roman font, and the following margin settings: header: 1,5 cm, footer: 1,5 cm, bottom: 1,5 cm, top: 1,5 cm, inside: 2,5 cm and outside: 1,5 cm.

The text should be justified (except table and image titles), and titles must be written in title case.

The paragraph indent is 1 cm. All paragraphs should be single spaced. After the headings and sub-headings there should be 1 line. Pages are numbered in the footer (with Arabic numbers, TNR, 10 points) starting with the first page number.

[line]

- **Header, footer, page numbering**

If you use this template when writing the full paper, headers and footers will be set automatically to the following values: header: 1,5 cm, and footer: 1,5 cm.

- **Fonts**

The paper will be written using TNR, size 10 points. You can use all text formatting options: bold, italic, and underlined.

- **Tables and figures**

Explanations for images and table titles must be sufficiently clear so as not to require confrontation with the text. Images and tables that are not referenced in the text will not be included in the paper. Titles of table, styles or captions for the picture are shown below. The example below corresponds to Table 1. Before and after the table there should be one line. Title of table includes: “.”, and title of figure “:”.

[line]

Table 1. Title of the Table used for Exemplification

Example	X	x x x x

[line]

Tables and figures should be placed near the place where the text refers to them. All figures and tables should be numbered with Arabic numerals. Titles of tables should be placed above the table and centred.

The paper can include a non-limited number of images. Their explanations and legends will be centred under them. Admitted minimum resolution of an image is 300 dpi.

Tables and figures titles must be written in title case:

[line]

Figure 1: Crankshaft Control Equipment

[line]

• **Equations**

Each equation must be present separated by a blank line before and after, from the rest of the text. Equations must be clear and notations used are explained in the text. Equations should be numbered consecutively at the end of the line, as you can see in examples (1) and (2) below.

This is an example:

[line]

...

$$\binom{m-1}{k-1} = \frac{(m-1)!}{(k-1)!(m-k)!} \quad (1)$$

[line]

Therefore, the total probability that the component of a group of m does not fall within the parameters concerned are:

[line]

$$Q_t = \sum_{k=1}^m \binom{m-1}{k-1} Q_k^{(m)} \quad (2)$$

...

[line]

• **Notes**

The numbers assigned to the notes in the text should be indicated by square brackets, e.g.: [1]. They should be listed in the same order they were cited in the text.

[line]

**Glossary (not mandatory)**

This section includes a brief definition of the most specialized terms, and it is optional.

[line]

**Acknowledgements (not mandatory)**

[line]

**References**

References used should be relevant to the topic addressed in the paper and have a high scientific quality. They should be recent enough, in order to be mentioned. They must be listed in alphabetic order, and, in case of websites, although only high scientific value websites shall be used, authors must include the date of website visit. If a reference includes Conference Proceedings, the dates (year included) of the conference must be included.
